Decades of Well-Established Veteran Experts Specialized in the Wood Truss & Wall Panel Component, LBM, and Home Builder Industries

Cost Savings and Net Profit Gains that Usually take Months or Years, Can be Accomplished in Weeks or Months with TDC

"From A to Z, Todd is a wealth of information about component manufacturing. *No matter how good you think you are, I would challenge anyone if you didn't find ways to improve your bottom line with his services. He is honest and direct in his assessment.* You may not like all that you hear, but his training and commonsense approach will have you convinced in short order.

An action plan of continuous improvement is a necessity in a highly competitive market, and he will help your group create a process improvement plan that will make a real definite improvement for all departments for an immediate implementation instead of taking months or years. We are excited to implement many of Todd's training and recommendations.

Todd is well worth the investment many times over."

John Hinshaw, Director of Truss Manufacturing, - Boise, Idaho

"Here at Huskey's, we have been a part of the LBM market for over 70 years. The component division is a big part of our services, and like all areas, we are always looking for improvement. So, we enlisted Todd's services, which have been widely recognized in the industry as an expert for improvement in all areas of the truss and wall panel manufacturing process.

Some of the areas that we saw an immediate improvement with Todd's help were the time standards for proper truss fabrication labor estimation that is far superior to board footage units. Also, we gained the knowledge of true costing, which is priceless information to have in these ever-competitive markets, which we serve. Improvement in plant efficiency and production flow seemed to be Todd's easiest areas to offer advisement that gave us immediate results that we are very pleased. Todd and our production manager went a long way in changing our production flow on our panel production side.

The way Todd performs his services and communicates allowed us to enjoy bouncing information and ideas off each other, and it helped strengthen and create teamwork with everyone. If you are looking for someone to offer sound advisement for improving the efficiencies, capacity, and profitability, I cannot recommend Todd's Services enough."

Vernon Bennett, Chief Operating Officer - Franklin, TN

"We hired Todd Drummond to consult with us this past week (Jan 2019) to evaluate our components business. We knew of him in the past but were warned by a few that he might be arrogant, and a sort of a know it all kind of personality. This negative view of his character couldn't be further from the truth. *We found him to be very knowledgeable, concise, approachable and very easy to converse with on all topics.* He listened to our concerns and addressed all of our questions. Given some of the more complex subjects, he took the time to go over the details until we understood. *At the end of the week, we found we had literally been given hundreds of ideas and suggestions to take our facilities to the next level.* We also discussed our equipment needs, wants, and he helped us sort through each of these.

I highly recommend Todd and his services.....especially if you are outside of my market area!!"

Russ Woodworth, Gastonia Truss GM - Gastonia, NC
